

IN THE CLAIMS

The following is a complete listing of claims and replaces all prior versions and listings of claims in the present application:

1. (currently amended): A digital broadcast receiving apparatus comprising:

means for setting a digital broadcast program and a print reservation of partial content which is provided in the program and can be displayed on a display when the program plays, in advance, based on a table of programs received from a digital broadcast station;

means for receiving a digital broadcast of the program set by said setting
means;

means for extracting the partial content set by said setting means;

judging means for judging whether or not extracted partial content includes an information part print-output of which is not permitted, based on print information in a header of the partial content, the print information indicating whether printing of the information part is permitted or not permitted; and

printing means for print-outputting the extracted partial content,

wherein ~~the~~ said printing means print-output only that portion of the extracted partial content other than the information part when ~~the~~ said judging means judge that the extracted partial content includes the information part.

2. (currently amended): A digital broadcast receiving apparatus, connected to printing means for print-outputting information provided by digital broadcasting, comprising:

means for setting a digital broadcast program and a print reservation of partial content which is provided in the program and can be displayed on a display when the program plays, in advance, based on a table of programs received from a digital broadcast station;

means for receiving a digital broadcast of the program set by said setting means;

means for extracting the partial content set by said setting means;

judging means for judging whether or not extracted partial content includes an information part print-output of which is not permitted, based on print information in a header of the partial content, the print information indicating whether printing of the information part is permitted or not permitted; and

output means for outputting print data of the extracted partial content to the printing means, wherein ~~the~~ said output means output only the print data of the extracted partial content other than the information part when ~~the~~ said judging means judge that the extracted partial content includes the information part.

3. - 18. (canceled).

19. (currently amended): A digital broadcast receiving method comprising:

a step of setting a digital broadcast program and a print reservation of partial content which is provided in the program and can be displayed on a display when the programs plays, in advance, based on a table of programs received from a digital broadcast station;

a step of receiving a digital broadcast of the program set in said setting step;

a step of extracting the partial content set in said setting step;

a step of judging whether or not extracted partial content includes an information part print-output of which is not permitted, based on print information in a header of the partial content, the print information indicating whether printing of the information part is permitted or not permitted; and

a printing step of print-outputting the extracted partial content,

wherein only that portion of the extracted partial content other than the information part is print-output in the said printing step when it is judged in the said judging step that the extracted partial content includes the information part.

20. (canceled).

21. (currently amended): A computer-readable recording medium on which a computer program for receiving digital broadcast is recorded, the computer program including:

code of a step of setting a digital broadcast program and a print reservation of partial content which is provided in the program and can be displayed on a display when

the program plays, in advance, based on a table of programs received from a digital broadcast station;

code of a step of receiving a digital broadcast of the program set in the setting step;

code of a step of extracting the partial content set in the setting step;

code of a step of judging whether or not extracted partial content includes an information part print-output of which is not permitted, based on print information in a header of the partial content, the print information indicating whether printing of the information part is permitted or not permitted; and

code of a printing step of print-outputting the extracted partial content, wherein only that portion of the extracted partial content other than the information part is print-output in the printing step when it is judged in the judging step that the extracted partial content includes the information part.

22. (canceled).

23. (currently amended): A digital broadcast system comprising a transmitting apparatus for transmitting digital broadcast and a receiving apparatus for receiving digital broadcast, wherein ~~the~~ said receiving apparatus comprises:

means for setting a digital broadcast program and a print reservation of partial content which is provided in the program and can be displayed on a display when the program plays, in advance, based on table of programs received from said transmitting apparatus;

means for receiving a digital broadcast of the program set by said setting means;

means for extracting the partial content set by said setting means;

judging means for judging whether or not extracted partial content includes an information part print-output of which is not permitted, based on print information in a header of the partial content, the print information indicating whether printing of the information part is permitted or not permitted; and

output means for outputting print data of the extracted partial content to the printing means,

wherein ~~the~~ said output means output[[s]] only that portion of the print data of the extracted partial content other than the information part when ~~the~~ said judging means judge that the extracted partial content includes the information part.

24. - 50. (canceled).

51. (currently amended): The digital broadcast receiving apparatus according to claim 1, wherein ~~the~~ said printing means print-output a screen image of the extracted partial content to be displayed, and ~~the~~ said printing means print-output an image other than the information part from the screen image when ~~the~~ said judging means judge that the extracted partial content includes the information part.

52. (currently amended): The digital broadcast receiving apparatus according to claim 2, wherein ~~the~~ said output means output print data of a screen image of

the extracted partial content to be displayed, and ~~the~~ said output means output print data of an image other than the information part from the screen image when ~~the~~ said judging means judge that the extracted partial content includes the information part.

53. (currently amended): The digital broadcast receiving method according to claim 19, wherein a screen image of the extracted partial content to be displayed is print-output in ~~the~~ said printing step, and an image other than the information part from the screen image is print-output in ~~the~~ said printing step when it is judged in ~~the~~ said judging step that the extracted partial content includes the information part.

54. (currently amended): The recording medium according to claim 21, wherein a screen image of the extracted partial content to be displayed is print-output in ~~the~~ said printing step, and an image other than the information part from the screen image is print-output in ~~the~~ said printing step when it is judged in ~~the~~ said judging step that the extracted partial content includes the information part.
